

Supply Chain Strategic Planning

Increase Efficiency, Lower Supply Costs, and Clinically Integrate your Supply Chain

Reduce Time. Save Money. Increase Profitability.

Health care organizations rely heavily on Supply Chain to deliver critical supplies at the right time, to the right place, at the right cost.

Today, health care leaders are taking a closer look at their supply chains. As hospitals partner, merge, or grow, the Supply Chain function can be fractured across many facilities or even in the same facility. It's not uncommon for the Surgery, Cath Lab, and Laboratory departments to have their own contracting, purchasing, and distribution staff and function separate from the Supply Chain department. This is inefficient, redundant, and expensive.

PARTNERING WITH OUR HOSPITAL CLIENTS

SHS's Supply Chain Strategic Planning encompasses the review of strategy, operations, staffing, contracts, and policies & procedures of your organization's supply chain function. The process begins with an extensive review of data and documents, coupled with one-on-one interviews with individuals who perform supply chain functions, as well as supply chain's executive leadership.

The deliverable identifies Supply Chain vulnerabilities and establishes multi-year goals & objectives, which also helps to identify supply chain operational efficiency recommendations, productivity initiatives, emergency preparedness plans, and savings opportunities.

THE SHS DIFFERENCE

SHS is a firm founded by supply chain professionals for supply chain professionals. Most third party advisory firms charge high fees for 100+ page reports containing flawed assumptions, unrealistic savings projections, no prioritization of objectives, and no implementation support.

With over 20 years of industry experience we put client satisfaction at the center of every engagement. Every project has three goals:

- The ROI is measurable and evident
- Project objectives are clear with ample implementation support from SHS to get the job done
- SHS feels like an extension of your team – not a third party firm

OPERATIONAL & STRATEGIC FUNCTIONS

Today's environment demands supply chain leaders increase capabilities in operational performance, emergency preparedness, and clinical integration all while reducing costs. Hospital leadership expects supply chain to play a strategic role from managing supply needs through a pandemic to integrating clinical outcomes into their financial and operational plans.

SHS will facilitate the entire process of creating a documented, multi-year strategic plan to revamp your organization's supply chain operations.

With SHS's Supply Chain Strategic Planning, your organization will realize reduced supply costs, effective clinical integration, increased operational efficiencies, and better emergency preparedness.

SHS's Supply Chain Strategic Planning includes the following services and deliverables:
